

Pharmaceutical
Service Network

Pharmaceutical Service Network (PSN) Opens Headquarters

Staunton, VA, USA and Madrid, Spain March 2011 –

The Pharmaceutical Service Network (PSN), a full-service global CRO that focuses on exceptional service with extensive local knowledge in a broad geographical footprint, has headquartered its operations in the United States and Spain. Initially founded as a network of independent organizations in 1997, the PSN offers full service CRO services with the benefits of working with a small CRO in addition to the depth of experience across an international scale.

The PSN will provide services in North America, Western, Central and Eastern Europe from the following regional offices:

Copenhagen, Denmark	Eindhoven, The Netherlands
London, United Kingdom	Lyon and Paris, France
Madrid and Barcelona, Spain	Munich, Germany
Rome and Milan, Italy	Staunton, Virginia and San Diego, California

The PSN will provide an alternative to large CROs for pharmaceutical and biotechnology companies that seek clinical development services. The PSN is unique in that each office can provide the local expertise and manpower without the higher overhead costs of a large CRO. The experienced personnel in each office provide a flat management structure and tailored services.

Each PSN office has extensive local experience and is managed by one of the PSN officers. With over 250 staff members with combined experience gained over several decades in all relevant areas of clinical research, the PSN can service any phase I-IV clinical program.

The PSN offices have access to a vast number of potential research subjects in North America, Western, Central and Eastern Europe. Since 1997 the PSN offices have managed over 4,000 sites and 50,000 patients. With recently completed or ongoing projects in oncology, neurology, cardiovascular disease and allergy/immunology, the PSN offers a broad range of therapeutic expertise to match any development need.

About the Pharmaceutical Service Network, (PSN)

The PSN offers a wide range of services to fully manage biotechnology and pharmaceutical companies through the clinical development process. Services include clinical operations, data management and biostatistics, regulatory and medical writing, pharmacoeconomics, quality assurance, safety and logistical support.
